Amazone launch flagship sprayer

Amazone is set to launch its largest trailed sprayer yet, offering 6600 litre capacity. The UX6200 Super heads up the new UX Super range that features extra tank capacity and are aimed at contractors and large scale farmers. The existing smaller capacity UX3200 and UX4200 models are available in both 'Super' and 'Special' variants, with the UX5200 and UX6200 in 'Super' only, the main difference being that Super models have a twin pump, as opposed to single pumps and are recommended for large working widths or high spray rates. New suction valve technology gives the Super models now filling speeds of up to 800 l/min.

Commenting on the new additions, Simon Brown, Amazone UK Brand Manager said, "Unlike most large capacity trailed sprayers available in the UK, these new models have been designed from the ground up for Western European and UK markets -unlike competitor sprayers which were developed for the Eastern European markets."

In recognition of the amount of roadwork UK farmers need to do, the UX6200 is so stable that it is capable of 30mp/h with a fully-loaded tank – and that is on row crop rather than flotation tyres. This is due to the design of the tank, which minimises content surging and the drawbar system which relieves the load on the axle and wheels aiding traction.

Simon Brown adds "the low centre of gravity and the perfect weight distribution mean that not only does it stay standing on both wheels but it pulls up and down hills with no problem at all"

The UX6200 can specified up to a 40m working width but because the booms fold into the side of the tank body, it has a height of just 3.8 m and a width of only 2.6 m, making it practical for use even down narrow country lanes.

Optional extras include axle steering, rear trailer towing hitch, GPS-Switch or HighFLOW pump equipment which doubles the maximum spraying rate. Optional also is LS hydraulic pump drive which ensures the pump can be operated at maximum capacity, independent of tractor engine speed whilst still controlling all the boom folding and axle steering functions.

The UX6200 Super will be available from summer 2010 and prices for the new UX Super range start from £55,366 .
